

# **GDM-8261A**

6 1/2 Digit Dual Measurement Multimeter

### **FEATURES**

- 6 1/2 Digit Display : 1,200,000 Counts
- DCV Basic Accuracy : 0.0035%
- Dual Measurements to Perform Two Selected Measurements Simultaneously
- Bright Vacuum Fluorescent Display (VFD)
- 11 Measurement Functions & 10 Math Functions
- High Resolution : Up to 100pA Resolution with DCI and 1nA with ACI Measurements
- Temperature Measurement (RTD & Thermocouple) From -200°C ~ +1820°C
- High Data Transmission Speed : Up to 2,400 readings/s Through USB Interface
- Standard Interfaces : USB, RS-232C, Digital I/O
- Optional Interfaces : GPIB or LAN
- Optional Scanner Card : GDM-SC1A (V ch x 16, I ch x 2)
- Free PC Software : Excel ADD-In, LabVIEW Driver

# **Boost Your Measurement Speed & Efficiency**

The GDM-8261A is a high precision 6 ½ digit Digital Multimeter with dual measurement displays, 11 measurement functions and 10 math functions at high accuracy (35ppm DC voltage accuracy) to accommodate the most frequently performed parameter measurements in various application fields today.

The GDM-8261A adopts a scanner card, which carries 16 V-Channels and 2 I-Channels, to facilitate the measurements of multiple-test points on either a device or multiple devices all at a press of a button. With this multi-point measurement capability, the GDM-8261A can be used as a semi-auto ATE System to increase the throughput of manufacturing test or as a data logger to perform long term monitoring or characterization of a DUT. A PC Software, DMM-Viewer, is available with GDM-8261A to support multi-channel panel setting and data logging of the scanner card. Besides, a LabVIEW driver is also supported to help user create his/her own virtual instrument on the PC screen for easy programming. For ATE system measurements or remote control applications, both USB and RS-232C Interfaces are provided as standard, and either GPIB or LAN can be selected as optional interface for the GDM-8261A.

### A. IDEAL FOR BENCH ASSIGNMENTS

The GDM-8261A includes all the basic measurement functions that are required for engineers to handle design, development and testing jobs for electronic circuits or products. The basic measurement functions include voltage, current, resistance, diode, continuity, frequency and temperature. Remarkably, the current measurement function covers a very wide range from  $100 \,\mu$  A to 10Afor DC current (in 6 ranges) and from 1mA to 10A for AC current (in 5 ranges). In addition, the GDM-8261A features 10 Math functions (dBm, dB, compare and other mathematical operations) to accommodate specific measurement requirements and complex measurement applications.

Β.

Unlike most of the "dual display" digital multimeters, which show test result on the primary display and range information on the secondary display, the GDM-8261A is able to perform two measurement functions simultaneously and shows the test results on primary display and secondary display respectively.

| 1st Display |              |              | 1            | 2nd Displa   | ay   |        |

|             | ACV          | DCV          | ACI          | DCI          | Hz/P | 2W/4W* |
| ACV         | ~            | 1            | ~            | ~            | 1    | -      |
| DCV         | $\checkmark$ | $\checkmark$ | $\checkmark$ | $\checkmark$ | ~    | -      |
| ACI         | ~            | ~            | ~            | ~            | ~    | -      |
| DCI         | ~            | 1            | ~            | ~            | 1    | -      |
| Hz/P        | ~            | 1            | ~            | ~            | 1    | -      |
| 2W/4W*      | -            | -            | -            | -            | -    | ~      |

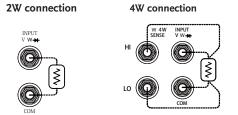

The GDM-8261A supports an almost unlimited number of measurement combinations of dual measurement functions, besides the normal test result and range information displays, greatly increases the test speed of multi-function measurement tasks.

| 7 | 2 |   |   |
|---|---|---|---|
| Ľ |   | 4 | , |
|   |   |   |   |

| Mode   | Resolution         | DCV/DCI/Resistance<br>Measurement Speed |
|--------|--------------------|---|
| Fast   | 4¹ <b>∡</b> digits | 2,400 readings/second                   |
| Medium | 5¹ <b>∕</b> digits | 600 readings/second                     |
| Slow   | 6¹≰ digits         | 30 readings/second                      |

The GDM-8261A offers an exceptionally high resolution of 0.1  $\mu$  V for voltage measurement, 100pA for DC current measurement, 1nA for AC current measurement, and 100  $\mu$   $\Omega$  for Resistance measurement. This level of resolution and accuracy becomes a must for the precision measurements in specific applications. In addition, the GDM-8261A is capable of acquiring 30 measurement readings/s at the display resolution of 4  $\frac{1}{2}$  digits and 2,400 readings/s at the display resolution of 6  $\frac{1}{2}$  digits. The fast acquisition rate of the GDM-8261A adequately meets today's measurement demands.

### D. 2/4 WIRE RESISTANCE MEASUREMENT

The GDM-8261A offers two methods, both 2-wire and 4-wire, for resistance measurements. The 2-wire measurement is most commonly used for resistance measurement in the range from  $100\Omega$  to  $10k\Omega$ . Whereas the 4-wire connection is normally applied for resistance measurement at a value lower than  $100\Omega$ . When applied, 4-wire measurement automatically compensates the test lead resistance and connector contact resistance to get an accurate measurement result.

### E. STORE / RECALL FUNCTION

The GDM-8261A is able to acquire and record 2  $\sim$  9999 measurement readings for the "store" and "recall" functions. This allows an immediate observation of the maximum, minimum, average or standard deviation values of all the recorded data whenever the data acquisition stops.

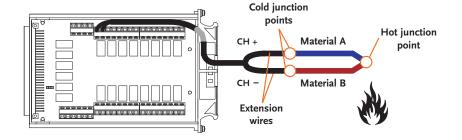

F.

The "Math" function of GDM-8261A includes four mathematical operations for measurements: MX+B, 1/X, Percentage and Stats. "MX+B" multiplies the measurement reading (X) by a factor (M) and adds/subtracts an offset value (B) to calculate linear offsets or scales. The "1/X" function divides 1 by the measurement reading (X), calculating the inverse of the reading. The "Percentage" function calculates the ratio of the measured value to a target value using the

following equation: (Reading X – Reference)/Reference x 100%. The "Stats" function makes statistical calculations continuously or by a user-defined measurement counts. The statistical calculations include Maximum, Minimum, Average and Standard deviation. With these mathematical operations, the GDM-8261A makes complex measurements quick and easy without the complexity of manual calculations.

G.

The GDM-8261A performs temperature measurement accommodating a wide range of temperature sensors of either thermocouples or RTD (Resistive Temperature Detectors). For thermocouples, the GDM-8261A uses voltage measurement terminals as the thermocouple input and calculates the temperature from the voltage fluctuation. Most of the popular thermocouple types are supported for temperature measurement on the GDM-8261A. For RTD sensors, the GDM-8261A calculates the voltage fluctuation arisen from the resistance variation due to temperature change. Either front panel terminals or scanner card terminals can be used as the input for temperature sensor.

### H. VERSATILE INTERFACES WITH FAST TRANSMISSION SPEED

For system applications, the GDM-8261A provides USB interface and RS-232C interface as standard. Up to 2,400 readings/s of data can be transferred over USB in ASCII format. Either GPIB or LAN interface is available as an option to support the ATE systems currently in use.

### . MULTIPOINT SCANNER CARD MEASUREMENT

The optional scanner card, with a field-installable design, is a self-contained multipoint measurement solution. This approach eliminates the complexities of software development for multipoint measurement and data processing. The scanner card allows users to effectively measure multiple channels connected to a single GDM-8261A.

Panel Setting & Data Acquisition for All Scanner Channels

### LabVIEW Driver

For the convenience of remote control and long time data acquisition, a free software, Excel ADD-In, is supported with the GDM-8261A. This software allows user to remotely control the GDM-8261A without the need to give commands or to develop programming software. For the data capture through a PC, the software allows user to continuously observe the measurement results before saving them into a file. When GDM-8261A works with scanner card for multi-point measurements, the Excel ADD-In allows user to easily select the measurement function and range for each channel and start acquiring measurement data promptly. The GDM-8261A LabVIEW driver is also available for free download. With this driver, the user is able to create a virtue instrument on the PC for the instrument control. With Excel ADD-In & LabVIEW driver, the GDM-8261A becomes a high value semi-auto ATE system without further software/hardware investments.

### PANEL INTRODUCTION

- 1. The 11 measurement functions can be selected at a button press; making operations easy and intuitive.
- 2. Dual VFD displays show the results of two different measurement functions simultaneously
- 3. Both 2-Wire and 4-Wire resistance measurements are supported. The low current measurement and high current measurement are made through different inputs
- 4. Two low DC current ranges (100 μ A and 1mA) are available for high resolution measurements down to 100pA detail
- 5. A number of built-in math functions are included : MX+B, 1/X, % and statistics (max/min/average/ standard deviation)
- 6. Either GPIB or LAN communication is supported as optional
- 7. Flexible-sized screw terminals on scanner card to support a wide range of wire gauges for flexible compatibility
- 8. The Digital I/O port sends out a signal of compare measurement result for external devices control. Additionally, the Digital I/O port can also be used as a power source for TTL & COMS logic.
- 9. USB and RS-232C communication ports facilitate the high speed communication
